

## Exclusions for Prescription Drug Benefits

Excluded drugs are prescription drugs that are not normally covered by a Medicare prescription drug plan. If you get excluded drugs, you must pay for them yourself.

Examples of excluded drugs:

- Any drug covered under Medicare Part A and/or Part B
- Any drug purchased outside the United States and its territories
- Non-prescription drugs (over-the-counter drugs)
- Drugs to promote fertility
- Drugs used for the symptomatic relief of cough or colds
- Outpatient drugs for which the manufacturer seeks to require that associated tests or monitoring services be purchased exclusively from the manufacturer as a condition of sale
- Drugs such as Viagra, Cialis, Levitra and Caverject, when used for treatment of sexual or erectile dysfunction
- Drugs used for the treatment of anorexia, weight loss or weight gain
- Drugs used for cosmetic purposes or to promote hair growth
- Prescription vitamins and mineral products except prenatal vitamins and fluoride preparations
- Barbiturates and Benzodiazepines
